FOR IMMEDIATE RELEASE

USWS GROWING TO MEET CUSTOMER DEMAND

HOUSTON, TX (May 30, 2017) – Over its first 5 years in operation, U.S. Well Services, LLC (USWS) has experienced phenomenal growth in terms of our customer base, operating areas, number of fleets and new technology development.

This trend continues as we announce another expansion from our current total hydraulic horsepower of 290,000 to 419,000 beginning in the 3rd quarter of 2017 which will allow us to better meet the changing market environment and the growing demand for our services. With recent success in entering the Cotton Valley, Austin Chalk, and Eagle Ford Shale plays in Texas, this represents a significant opportunity for U.S. Well Services to not only work with new customers, but also to enter a new basin, further expanding the USWS brand as we seek to provide fracturing solutions that continue to exceed customer needs.

We are always evaluating opportunities to bring our technology and expertise to other oil and gas plays throughout the United States and encourage both current and new customers to contact us to explore additional contracted services.

U.S. Well Services, LLC, provides high-pressure, hydraulic fracturing services in unconventional oil and natural gas basins. Both our conventional (diesel) and Clean Fleet® (electric) hydraulic fracturing fleets are among the most reliable and highest performing fleets in the industry, with the capability to meet the most demanding pressure and rate requirements in the industry.
